

## ABSTRACT OF THE DISCLOSURE

5           Reselection methods for wireless communication devices, for  
example cellular telephones, that reduce power consumption by receiving periodic  
paging information (210) concurrently with the performance of periodic signal  
measurements (230) and reselection processing (250) to increase minimal power  
consumption mode operation. In some embodiment, the reselection processing  
10       (252) is performed on prior signal measurements (230) while obtaining present  
signal measurement data (240).
